

# The Qumu Skype for Business Integration

Record and stream directly from SfB—with no capacity limitations.

## Integration Overview

This Qumu-certified integration allows organizations to seamlessly leverage Skype for Business for live, large-scale events—as well as record, store and distribute events as on demand assets.

**Organizations can now stream, record, store and manage Skype for Business meetings seamlessly within the Qumu Enterprise Video Platform—with no limitations on capacity or negative effects on network bandwidth—for consumption on any device.**

**Stream** meetings and collaboration sessions to large audiences and include audio, video, presentations and slides, and chats.

**Record** all or selected Skype for Business meetings for compliance purposes, or for distribution as Video on Demand assets.

**Store** Skype for Business meetings in a secure repository that includes analytics, intelligence-based search, retention policies and publishing workflows.

**Manage** recorded Skype for Business meetings as assets for distribution in Microsoft portals like SharePoint and Yammer.

## How It Works

**Step 1:** Access the Recording and Streaming feature directly from the Skype for Business menu.

**Step 2:** Use Outlook to schedule the date and time of the event, and invite both active and passive participants.

**Step 3:** Execute the event while recording all audio, video, presentations and chats.

**Step 4:** Make the post-event recording available immediately to everyone, or set up permission-based access.

**Step 5:** Archive the event in any video repository and include options for search, captioning and translation.

Expand Skype for Business by enabling large-scale streaming and recording.

**Use Cases**

**Internal collaboration**

Host large-scale team meetings, project review sessions and departmental updates, and record them for distribution to employees who could not attend.

**External collaboration**

Broadcast live from trade events and conferences, present to partner networks, or deliver live crisis updates to customers and stakeholders without assistance from IT.

**Team-to-Many events**

Schedule, produce, and broadcast team meetings and executive round tables globally, to tens of thousands of employees and for viewing on any end-user device.

**Boost productivity.**

Maximize both viewership and engagement by distributing recorded meeting assets.

**Increase reach.**

Stream live and on demand sessions to tens of thousands of users, for viewing on any device.

**Build a repository.**

Record live streamed events for posting on internal Microsoft social & collaboration portals.

**Save time and money.**

Run large-scale live broadcasts across the globe, without assistance from IT.
